This invention describes a novel human G-protein coupled glycoprotein hormone receptor, HG38. Glycoprotein hormone receptors are important in the endocrine system and HG38 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the HG38 receptor, as well as for studying the ability of a variety of compounds to act as modulators of HG38 receptor activity ATACCAGACTATGCCTTTGGAAACCTCTCCAGCTTGGTAGTTCTACATCTCCATAACAAT TTAAATTACAATAACCTTGATGAATTCCCCACTGCAATTAGGACACTCCCAACCTTAAA AGAATCCACTCCCTGGGAAAGAAATGCTTTGATGGGCTCCACAGCCTAGAGACTTTAGAT GCTCTGACATACATTCCCAAGGGAGCATTCACTGGCCTTTACAGTCTTAAAGTTCTTATG Arecacaccrecegerregrerecreterregrerecriecerecrecrecrecege GAGCCCGACGGCAGGATGTTGCTCAGGGTGGACTGCTCCGACCTGGGGGCTCTCGGAGCTG CTGCTCCCGAATCCCCTGCCCAGTCTCCGCTTCCTGGAGGAGTTACGTCTTGCGGGAAAC Length:

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRS, AAY90643-AAY90643-Y90681), and to DNA encoding them (AAA30709-A30743) and AAA30775-A30779). The mutant proteins of the invention contain a contain a matation in a portion of the protein comprising intracellular loop 3 (CC in an disperse domain 6 (TMG). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TMG to form a sequence X-contains of an endogenous proline in TMG to form a sequence X-contains of an endogenous proline in TMG to form a sequence X-contains of an endogenous proline in TMG to form Jus, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous crecidues. The constitutively active GPCRs are useful for identifying antagonists and partial agonists for use as pharmaceutical containment proteins are also useful in research settings for a particular GPCR are useful for treating diseases and disorders associated with that receptors in normal and diseases and disorders associated with that receptors in normal and diseases and disorders associated with that receptors Eccause the novel mutant GPCR are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence corporation and human wild-type GPCR referred to in an exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GGGGCAGCTCTCCCAGGTCTGGTGTGTTGCTGAGGGGCTGCCCCACACACTGTCATTGC 120

cc acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and 101 an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (1) can be used as GPCR modulators and in the production of specific antibody against a particular GPCR. (1) can be used as GPCR modulators and in the production of specific antibodies. The peptides for GPCRs are useful in detecting an GPCR antibodies. The peptides and antibodies are useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for disgnosing and designing the creating immune-related disease, immunological-related cell proliferative creameration-related disease, immunological-related cell proliferative diseases, or autoimmune disease, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarchritis, osteoaporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease diabetes, graft versus host cancer, cardiomyopathy, chronic and acute inflammation, allergies, crohn's disease diabetes, graft versus host cancers, parkinson's disease, multiple sclerosis, parkinson's disease, correct of disease, parkinson's disease, multiple sclerosis, pain, psoriasis, or correct of series, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, cany other disorder in which GPCRs are involved. The antibodies may be used in immunoaseays and immunodiagnosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated HGPRBMY5 polypeptide. The polypeptides, polynucleotides and methods are useful for preventing, treating or ameliorating a medical condition such as a neoplastic disorder e.g. leukaemia and breast cancer; immune disorder e.g. AIDS and rheumatoid arthritis; neuronal disorder e.g. Alzheimer's disease and Parkinson's disease; respiratory disorder e.g. ovarian carcinoma and meig's syndrome; colon disease; breast disease; thalamus related disorder; amygdala related disorder; corpus callosum related disorder; caudate nucleus related disorder; hippocampus related disorder; caudate the GFCR polypeptide or its homologue. The present sequence represents the amino acid sequence of a G-protein coupled receptor used to show homology with the human G-protein coupled receptor, HGPCRBMY
                                                                                                                                                                      Parkinson's disease; respiratory disorder; bronchopulmonary disease; pancoast's syndrome; ovarian disorder; ovarian carcinoma; colon disease; Meig's syndrome; breast disease; thalamus related disorder; gene therapy; amygdala related disorder; corpus callosum related disorder; hippocampus related disorder.
                                                                                                                                             neoplastic disorder; leukaemia; breast cancer; immune disorder; AIDS; rheumatoid arthritis; neuronal disorder; Alzheimer's disease; receptor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New G-protein coupled receptor polypeptides, designated as HGPRBMY5, useful for preventing, treating or ameliorating a medical condition related to the colon, breast, ovaries or immune system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               907

coupled receptor (GPCR) comprises substituting a specific amino acid in the transmembrane-6 region with a different amino acid, and testing for constitutive activity.

Example 1; SEQ ID NO 264; 221pp; English

The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GPCR) that has a transmembrane-6 (TMG) region and an intracellular-3 (IC3) region, by substituting a specific amino acid in the TMG region with a different amino acid, and testing for constitutively activity. The method is useful for creating a constitutively acity extinor an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR cegion and an intracellular loop 3 region. The altered human GPCR colypeptides are useful for screening test compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCR may also be used in vivo or in vivo in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR colyman G protein-coupled receptor without the need for provision of a ligand for the receptor. This is particularly useful in allowing screening of compounds against orphan receptors for which no ligand is currently known. This sequence represents a human GPCR polypeptide of the Invention.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, cor human polynucleotides or a polynucleotide acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a chat increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the cativity in an animal of one or more of the specification, a method for identifying a compound useful in treating compliance of or identifying a compound useful in treating compliances its activity is useful for preparing a medicament for treating compliances its activity is useful for preparing a medicament for treating compliances its activity is useful for preparing a medicament for treating compliance of a specification which is differentially expressed during pain. Note: the specification, but was obtained in electronic form directly from WIPO at the way obtained in electronic form directly from wIPO at sequence or the specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, pain, neuronal tissue, gene therapy, spinal segmental nerve injury, chronic constriction injury, CCI, spared nerve injury, SNI, Chung.

The invention discusses a composition of the mucleic acid sequence. Also derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a compound that regulates the activity of one or more of the composition, a continity in an animal of one or more of the polymetides given in the activity in an animal of one or more of the polymetides given in the compound to a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of the special activity is useful for preparing a medicament for treating pain and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specialication, but was obtained in electronic form directly from WIPO at the wipo.int/pub/published_pot_escored or electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention discloses a composition comprising two or more isolated rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a new isolated polypeptide comprising: a polypeptide or its mature form comprising a sequence not given in the specification; or a variant of (A), where one or more amino acid residues in the variant differs in no more than 15% from the amino acid sequence of the mature form. The pharmaceutical composition may be administered via oral, transdermal, rectal or parenteral route. The polypeptide, nucleic acid or antibody is useful for preparing a composition for treating or preventing a NoWX-associated disorder, e.g., cancer. This is the amino acid sequence of a transmembrane receptor homologue used in a comparison with the novel human proteins of the invention.

New constitutively active, non-endogenous version of an endogenous human G protein-coupled receptor for the identification of therapeutic compounds, such as agonists.
WPI; 2003-801247/75.
N-PSDB; ADH14255.
```

Example 1; SEQ ID NO 264; 227pp; English.

The invention relates to a constitutively active, non-endogenous version of an endogenous human G protein-coupled receptor (GPCR). The GPCR is used for screening therapeutic compounds as inverse agonists, agonists or partial agonists. The GPCR can be also be used to elucidate and understand the roles of GPCRs in normal and diseased humans. The GPCR need not be purified and isolated to be used to screen for therapeutic compounds. The utility of the GPCR as a research tool is enhanced because the role of a particular receptor can be understood before the endogenous ligand is identified. The present sequence is used in the exemplification of the present invention.

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
of determining the presence or absence of a pathological cell in a
of determining the presence or absence of a pathological cell in a
of determining the presence or absence of a pathological cell in a
of determining the presence or absence of a pathological cell in a
of the invention or by detecting a polypeptide of the invention. The
invention also relates to expression vectors and host cells comprising a
concleic acid of the invention, antibodies which specifically bind a
polypeptide of the invention, use of such antibodies for drug targeting;
and methods of screening for modulacors of activity or expression of the
polypeptides and nucleic acids. The nucleic acids, polypeptides,
cancer and other conditions such as sporiasis, ischaemia, heart disease,
atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
everyacularisterian syndromes, scarring and uterine fibroids. They may
close be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                                                     Human, differential expression, cancer, angiogenic disorder,

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
content by detecting a nucleic acid at least 80% identical to those of
the invention also relates to expression vectors and host cells comprising a
invention also relates to expression vectors and host cells comprising a
concleic acid of the invention; antibodies which specifically bind a
polypeptide of the invention; antibodies for drug targeting;
and methods of screening for modulators of activity or expression of the
polypeptides and nucleic acids. The nucleic acids, polypeptides,
and methods are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia, heart disease,
therosclerosis, inflammatory diseases, autoimmune diseases, retinal
neovascularistation syndromes, acarring and uterine fibroids. They may
also be useful in wound healing and in contraception. The present
sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GGGGGCAGCTCTCCCAGGTCTGCTGCTGAGGGGCTGCCCCACACACTGTCATTGC 120

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
content by detecting a nucleic acid at least 80% identical to those of
the invention or by detecting a polypeptide of the invention. The
convention also relates to expression vectors and host cells comprising a
convention also relates to expression vectors and host cells comprising a
concleic acid of the invention; antibodies which specifically bind a
concleic acid of the invention; use of such antibodies for drug targeting;
and methods of screening for modulators of activity or expression of the
colypeptides and nucleic acids. The nucleic acids, polypeptides,
antibodies and methods are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia, heart disease,
atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
neovascularistaion syndromes, scarring and uterine fibroids. They may
also be useful in wound healing and in contraception. The present

cc from the trasngenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising cromber by probles wiltch hybridise to GPCR polymorleotides of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may diseased in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders of the adrenal gland; disorders of the colon or intestine (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel cyndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders; blood disorders (e.g., anomania or leuksemia); immune disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid arrhitals, gout or osteoporosis); metabolic or nutritive disorders or cobesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, breast, ovary, cuterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thymus and thymus and chyroid (e.g., cancers). The present sequence represents a GPCR of the invention. Note: The full sequence data for this patent did not form part cof the printed specification; those sequences not shown were obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360

                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of identifying a mammal that will respond therapeutically to a method of treating cancer by administering an espond therapeutically to a method of treating cancer by comparing the can epidermal growth factor receptor (EGPR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an BGFR modulator. The method comprises: (a) measuring, in the mammal, the level of the biomarker identified in the specification; (b) exposing the mammal to the EGFR modulator; and (c) measuring in the mammal the level of the biomarker, where a difference in the level in step (c) compared to step (a) indicates that the mammal will respond therapeutically to the method of treating cancer. The method and biomarkers are useful for identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidemial growth factor receptor (EGFR) modulator. This sequence corresponds to one of the biomarkers whose levels of expression is measured in the method of the invention.

This sequence represents the human G protein-coupled receptor (GPCR) known as HG38. The HG38 protein and corresponding nucleic acid, may be used in the method of the invention for detecting colon or lung cancer. The first method involves performing an assay to determine the amount of HG38 in a sample of colon or lung tissue, and comparing the amount of protein to standard, thus detecting expression of protein in sample, where differential expression of protein in sample,
                                                                                                                                                                                                                                801 IleLysPheIleLeuLeuValValValProLeuProAlaCysLeuAsnProLeuLeuTyr

standard is diagnostic of colon or lung cancer. The second method involves hybridizing a composition comprising the HG38 coding sequence, or its complement, and a labelling moiety, to nucleic acids of a sample colon or lung tissue under conditions to form at least one hybridization complex, detecting hybridization complex formation, and differential expression of the polynuclectide in the sample relative to the standard and is diagnostic of a colon or lung cancer. This first method enables earlier diagnostic of a colon or lung cancer. This first HG38 antibodies are useful for treating colon or lung cancer.	ment Scores: No.: 907 No.: 907.00 Matches: 907 Sint Similarity: 100.00\$ Mismatches: 0 Match: 100.00\$ Mismatches: 0 Gaps: 0	-736-21 (1-2724) x ADR67868 (1-907) 1 ATGGACACCTCCCGGCTCGGTGCTCCTGTCCTTGCCTGTGCTGCTGC	MetAspThrSerArgLeuGlyValLeuLeuSerLeuProValLeuLeuGlnLeuAlaThr GGGGGCAGCTCTCCCAGGTCTGGTGTTGCTGAGGGGTGCCCCACACACTGTCATTGC	21 GIYGIYSETSETPIOATGSETGIYVALLEULEUARGGIYCYBPFOINTHIBCYSHIBCYS 40 121 GAGCCCGACGGCAGGATGTTGCTCAGGGTGGACTGCTCCGACCTGGGGCTCTCGGAGCTG 180	41 GlubroAspGlyArgMetLeuLeuArgValAspCysSerAspLeuGlyLeuSerGluLeu 60	181 CCTTCCAACCTCAGCGTCTTCACCTCCTACACCTCAGTATGAACAACATCAGTCAG	241 CTGCTCCCGAATCCCCTGCCCAGTCTCCGCTTCCTGGAGAGATTACGTCTTGCGGAAAC 300	301 GCTCTGACATACATTCCCAAGGGAGCATTCACTGGCCTTTACAGTCTTAAAGTTCTTATG 360 	CTGCAGAATAATCAGCTAAGAAGTACCCACAGAGTCTGCAGAATTTTGCGAAGCCTT		421 CAATCCCTGCGTCTGGATGCTAACCACATCAGCTATGTGCCCCCAAGCTGTTTCAGTGGC 480	481 CTGCATTCCCTGAGGCACCTGTGGCTGGATGACAATGCGTTAACAGAAATCCCCGTCCAG 540 	541 GCTTTTAGAAGTTTATCGGCAFTGCCACCACACACCCTGGCCTGG		601 ATACCAGACTATGCCTTTGGAAACCTCTCCAGCTTGGTAGTTCTACATCTCCATAACAAT 660	201 ileProAspTyrAlaPheGlyAsnLeuSerSerLeuValValLeuHisLeuHisAsnAsn 220	661 AGAATCCACTCCCTGGGAAAGAAATGCTTTGATGGGCTCCACAGCCTAGAGACTTTAGAT 720	721 TTAARTTACAATAACCTTGATGAATTCCCCACTGCAATTAGGACACTCTCCAACCTTAAA 780

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                       l atggacacctcccggctcgg......catttgtcccatgtctctaa 2724

Sequence 17184, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J Rubenfield et al.
APPLICANT: Marc J Rubenfield et al.
APPLICANT: Marc J Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRENDE: 107196, 136
CURRENT APPLICATION NUMBER: US 60/074, 788
PRIOR APPLICATION NUMBER: US 60/094, 190
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

LENGTH: 131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Rubenfield et al.

Sequence 28441, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT PELING DATE: 1999-02-18

PRIOR PILING DATE: 1998-02-18

PRIOR PLING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 28441

LENGTH: 157
